BURNER FOR PELLETS

WOOD PELLETS

AGRO PELLETS

**BOILER ALLOWS YOU TO CONTROL THE HEATING SYSTEM, INCLUDING A HEAT BUFFER, THE SOLAR SYSTEM AND 16 ADDITIONAL HEATING CIRCUITS (EACH CONTROLLED INDEPENDENTLY WITH THE WEEKLY TIME PROGRAM).**

- Automatic burner start. Flame control on photodiode. Fluently adjusts the amount of fuel and air. Buzzer informs about the state of an alarm. Two types of menu. The history of the last 20 alarms with date of their inception.
- Possible to use broadband Lambda probe (measuring the quantity of oxygen in the exhaust), and to control power of the burner with Fuzzy Logic II method. Possibility: connecting room sensor, weather sensor, and control of a mixing valve.

### POSSIBILITY OF COOPERATION WITH A GSM MODULE:

Remotely operated controller (control of the boiler operation and settings changing). Via SMS (mobile phone) – is possible to read or change the parameters of the heating controller from any location. Possible to set SMS notifications about important work changes.

### **MOBILE SERVICE MODULE FOR AUTOMATIC CONTROL OF BOILER SETTINGS.**

#### ➤ **FUNCTIONALITY:**

Modern and compact design allows for device installation in small spaces. Automation of fuel dosage and fan power levels. High functionality is provided through the use of automatic lighting and feeding of pellets.

#### ➤ **SAFETY:**

Safety systems allows for effective work of the boiler in open and closed heating systems. In accordance with European Standard EN 303-5:2012, this technology got V – the highest class of heating reliability and reduction of CO<sub>2</sub> gas.

#### ➤ **ECOLOGY:**

The long-term ecological effect – reduction of CO<sub>2</sub> gas emissions, is achieved by use of recommended ecological biomass fuel – pellets type.
